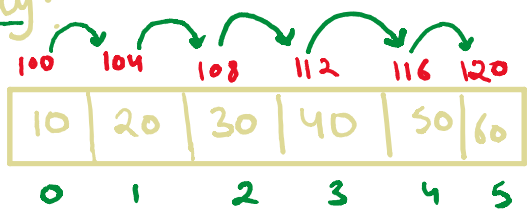
LinkedList

24 January 2026 13:29

Array:	LinkedList:
i) Contiguous in nature.	i) It is not contiguous in nature.
ii) Static Data Structure.	ii) Dynamic Data Structure.
iii) accessing element in an array is O(1).	iii) accessing element in linkedlist is O(n).

Array:



```
for (int i=0; i<6; i++){
    System.out.println(arr[i]);
}
```

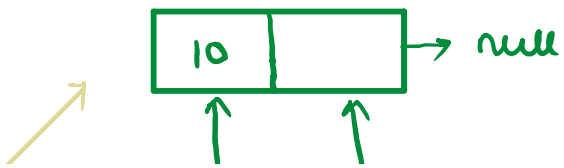
3

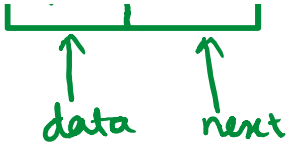
LinkedList:

(Singly Linkedlist)

Node = data + address of next element

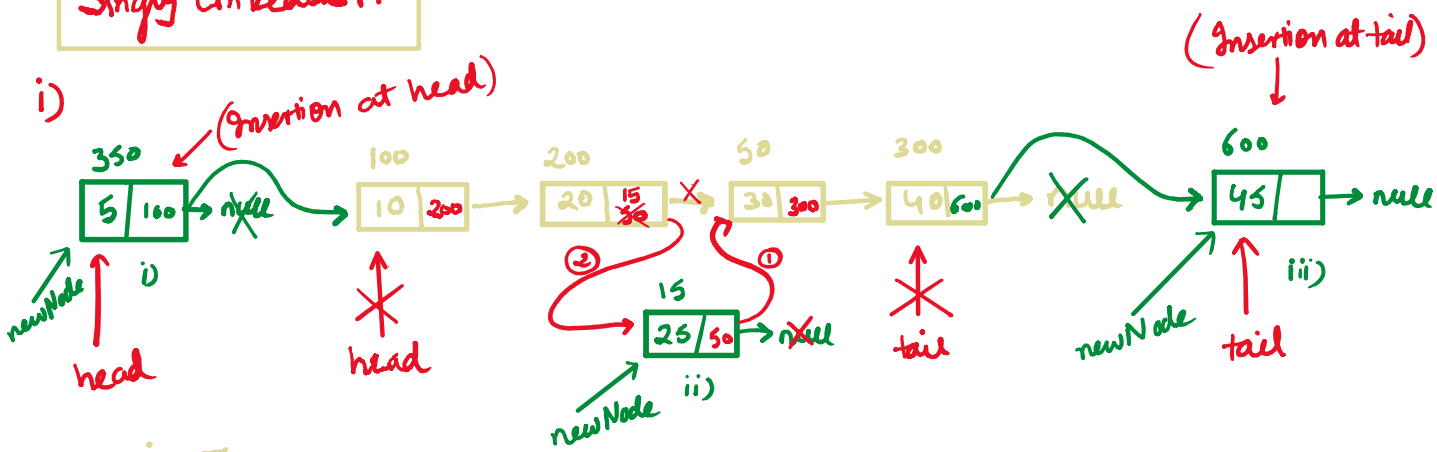
Structure of a Node:





Singly Linkedlist :-

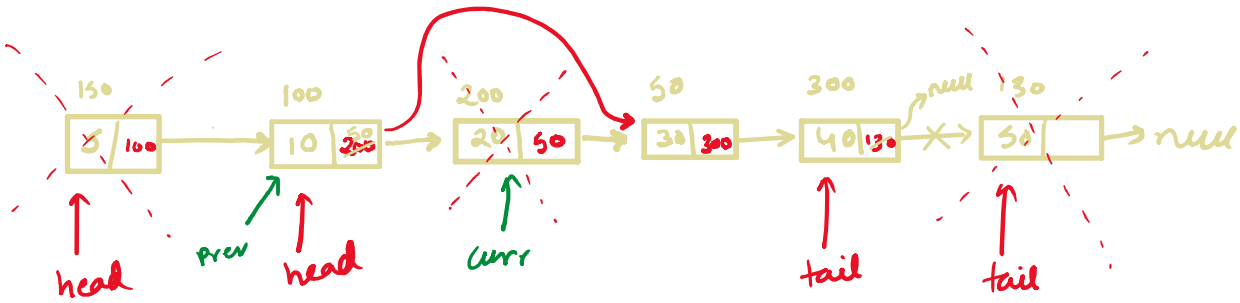
i)



i) Insertion:

- → i) Insertion at head.
- → ii) Insertion at middle.
- → iii) Insertion at tail.

ii) Deletion:



Deletion:

- → i) Deletion from head.
- → ii) Deletion from middle.
- → iii) Deletion from tail.

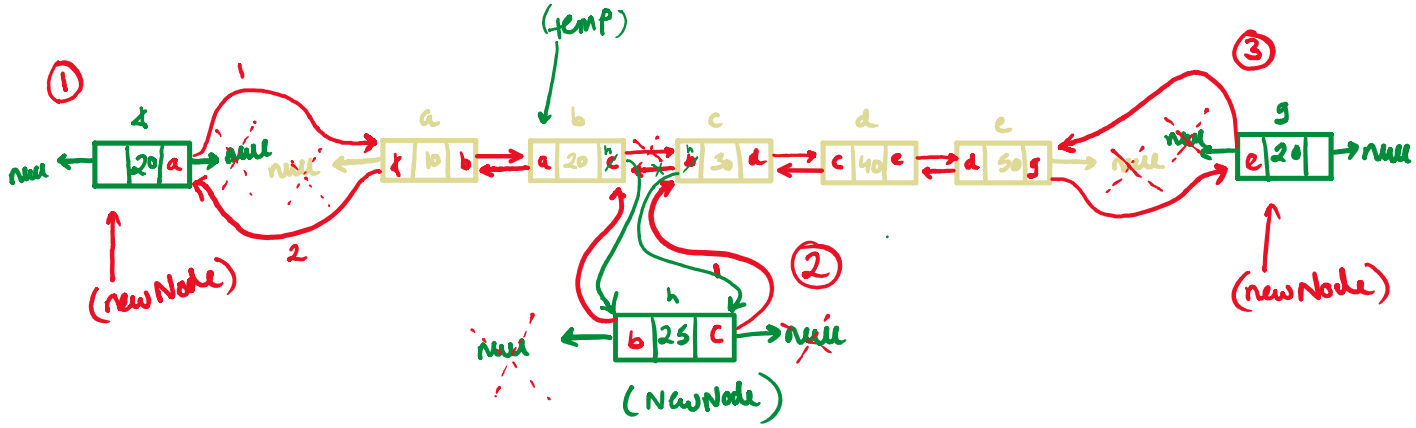
ii) Doubly linked list :-

i) Doubly Linked List:

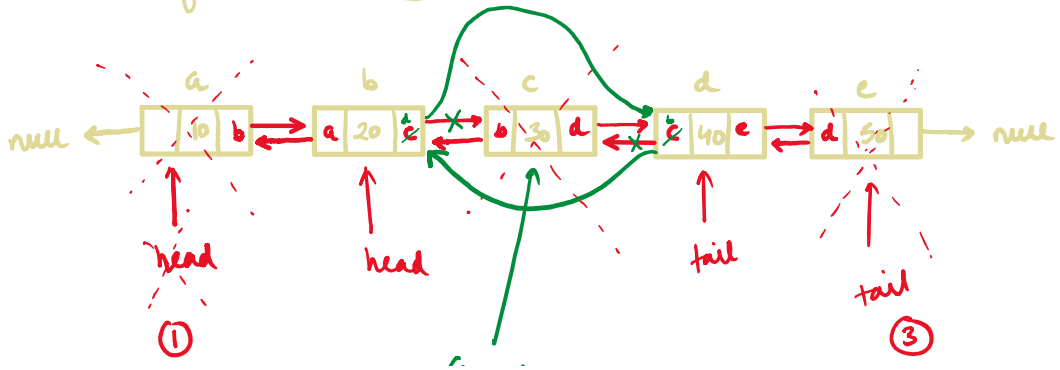
Structure of a Node:-

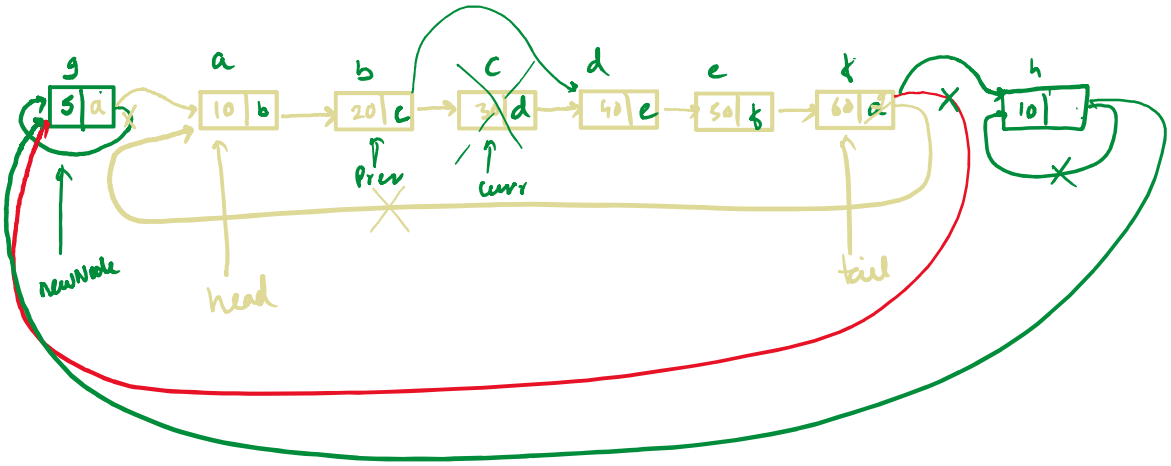
i) Insertion in Doubly Linkedlist:

- i) Insertion at head.
- ii) Insertion at middle.
- iii) Insertion at tail.



ii) Deletion from Doubly linkedlist:-





iii) Circular linkedlist:
